Not illustrated. 1897 Excerpt: .In Fig. 103 is shown a section of a steam fire engine built by Egccstorff of Hanover.j The vertical boiler A has a cylindrical fire box B, and contains 199 tubes of 35 mm. 1j ins. diameter, the total surface exposed to the fire or gases being about 28 sq. metres 300 sq. ft. The steam pump D is Fig. j03. located on the top of the cylindrical suction air chamber C, from which the water is sucked through the pipe c and forced into the delivery air chamber W. Steam is furnished to the engine through the pipe a, and exhausted through d into the smoke stack S with a view to increasing the draught. The pump is double acting, and has four valves V, the arrangement of which is shown in the section (Fig. 104). The steam piston is directly connected to the pump...
