Reviews

A high quality pdf as well as the typeface applied was exciting to see. It really is written in simple words and phrases rather than difficult to understand. You will not really feel monotony at any time of your time (that's what catalogs are for relating to in the event you question me).

The ore or shearage zone appears to be in the form of a long gigantic lens, thickest in the middle and diminishing north and south along the Bstrike of the so called vein. The great width of the vein or zone requires the uge of square sets, as many aa five sets of 6 feet centers, side by aide, being used across the vein and up the slopes, the square sets following the stones right up as stoping progresses. In some of the very wide places the square sets remind us of the excavation rather of a very wide coal seam than of a gold vein. The zone is oxidized to as great a depth as is at present reached, viz., nearly 1,000 feet. Spurs come in in places diagonally into the main vein or zone, these which in ordinary mining are often of little width, length, or account, are here wide enough and long enough to be worked at a profit and to form an important feature in the mine. One of these span comes into the main body in a southeasterly direction and is 4 feet wide and has been worked for a long distance. At the end of one of these spur drifts, they were trying a new Schmucker pneumatic-hammer air-drill. One advantage claimed for this drill was that the auger-like worm screw wrapped around the drill on withdrawal from the hole brought...
