In the opinion of Ashley, the relative amount of colloid (jelly-like) matter in unit weight of clay may be found by determining the amount of malachite green adsorbed from a solution containing 3 grams of this substance per liter. By taking a very plastic clay (Tennessee ball clay) as the standard for comparison, the relative colloid value is made to express the colloid content compared with the standard. Mechanical analyses of loess f rom road cut a mile northeast of Grimsby. 1 Mechanical analyses of loess from road cut a mile northeast of Grimsby--Continued. One of the most interesting facts shown by these analyses is the confirmation of the inference that fine particles are beingcarried down from the surface to a position a few feet below the surface. The materials taken in the order of their depth below the surface contain...
